PROFESSIONAL SUMMARY

Motivated fresher and AI enthusiast with hands-on experience building Python automation tools, REST API integrations, and data pipelines. Passionate about Generative AI and NLP with practical exposure to LLM-powered workflows using Claude (Anthropic), Cursor AI, and Anysphere. Skilled in Python, scikit-learn, and JavaScript, with a strong foundation in data preprocessing, feature engineering, and model experimentation. Eager to contribute to cutting-edge Generative AI solutions at Hexaware.

WORK EXPERIENCE

Generative AI & Automation Intern · Purple United Kids | Nov 2025 – Present

AI-Powered Automation

- Built Myntra-Auto-Lister — a Python-based intelligent automation tool using REST APIs and AI-assisted code generation (Claude + Cursor AI) to automatically extract product details, generate listings, and push catalog data to Myntra marketplace — eliminating manual listing effort entirely.
- Developed D2C_AutoLister — a JavaScript automation tool to fetch product details, sizes, and availability across the Shopify D2C storefront via REST APIs, enabling on-demand single-run catalog pulls and reducing manual catalog checks to zero.
- Automated end-to-end business reporting pipelines using Python and structured data transformation, reducing reporting time from 30+ hours to under 2 minutes — a >99% reduction in manual effort.
- Built an Image Processing & Dropbox Link Automation tool for Nykaa and FirstCry marketplaces to bulk-process product images, auto-generate shareable links, and push catalog-ready assets — cutting catalog update time from 2–3 hours to ~10 minutes.

Analytics Dashboard (Full-Stack)

- Designed and deployed Dyno Dashboard — a full-stack React JS analytics dashboard (live at dyno-dashboard.vercel.app) featuring interactive KPI visualizations and real-time operational metrics, built with AI-assisted development using Claude and Cursor AI.
- Architected dynamic UI components enabling non-technical stakeholders to explore sales trends, return rates, and ASP without any manual compilation.

Data Analytics & Reporting

- Performed end-to-end sales analysis across FY25–26, tracking 98,524 units and ₹6.72 Cr gross revenue; identified ASP growth from ₹455 to ₹726 (+59.6%).
- Analyzed return data across all platforms, identifying high-return SKUs; supported initiatives reducing return rate from 47.9% (Q1) to 26.7% (Q4) — a 44% improvement.

Data Engineering Intern · Cognizant Technology Solutions | Mar 2025 – Jul 2025

- Designed and implemented a healthcare subscriber data pipeline using ETL (Informatica PowerCenter) to extract, transform, and load subscriber data into Oracle databases with validation and error-handling frameworks.
- Applied advanced data transformation techniques — Expression, Router, Filter, Joiner, Union — to cleanse and standardize thousands of subscriber records.
- Automated generation of personalized XML welcome letters via validated subscriber data, improving onboarding efficiency and enabling scalable communication workflows.

TECHNICAL SKILLS

Languages: Python, JavaScript (Basic), SQL, Bash/Unix

AI / ML Libraries: scikit-learn, Pandas, NumPy, REST API integrations

Generative AI Tools: Claude (Anthropic), Cursor AI, Anysphere — used in production projects

NLP & ML Concepts: Supervised & Unsupervised Learning, Text Processing, Feature Engineering, Model Evaluation

Web & Frontend: React JS, JavaScript

Data Engineering: ETL (Informatica PowerCenter), Data Transformation, Data Validation

Version Control: Git, GitHub

BI & Analytics: Power BI, Advanced Excel, KPI Tracking, MIS Reporting

EDUCATION

Bachelor of Technology (B.Tech)

Computer Science / Engineering | 2021 – 2025

CERTIFICATIONS

- HackerRank: React (Basic), JavaScript (Basic), SQL (Basic)
- Udemy: SQL Basics · Data Warehouse Fundamentals · Data Modelling · Bash Scripting
